THE REALISATION OF OUR IDEAS

IDEAS S.A. located in Brussels is a young and dynamic company founded by Stéphane Huberty doctor in Medicine.

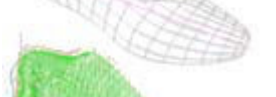

Since 1989, IDEAS has been developing high technology equipment to serve the entire Footwear industry, as well as the manufacturers of made-to-measure shoes and orthopaedics worldwide.

Overall, our range of products can be classified into three major categories:

1) Digitisers used for the **measurement** of the different parts of the human body.

2) CAD/CAM software used for the **modeling** of lasts, insoles and orthotics, moulds and orthopaedic elements.

3) Numerical Command Milling Machines (NCMM) used for the **manufacturing** of lasts, insoles and orthotics, moulds and orthopaedic elements.

Although our devices are designed to work together as a complete system, each one of them can also be linked to other major devices available on the market by the means of the appropriate interface.

We are active on an international level, providing quality products and services in more than 15 countries around the globe.
